

3Q2021 Small Cap Investment Commentary

You may recall the concerns we expressed earlier this year regarding congestion across the value chain. We suggested that it was always going to be a challenge, no matter how technologically advanced things had become, when entire economies are shuttered, partially opened, partially or fully shuttered, then re-opened, etc., it was never just going to be a smooth, upwardly sloping ramp back to “normal.” And irrespective of one’s vision about the future of commerce - where one might believe that people only leisure and robots do all the work - at this very moment in time, and for now, people (labor) matter. Whatever the reasons for the shortages, whether labor, base commodities, or finished goods, turning off the tap at the source was always going to create a vacuum that disrupts the normal flow of goods and services, and oh by the way, once it does begin to flow, there tends to be lots of sediment that has been trapped in the line for years that must come out first before it runs clear. To continue the analogy, every waterline is not the same length and they have not been maintained to the same standards so the condition they are in before they are shut at the source will create very different outcomes once reopened. Alright, enough with the waterpipes. So, what might this mean to the marketplace in general and then more specifically as it relates to our portfolio companies?

Well, in part, we are seeing many of the natural consequences associated with pent up demand surging whilst suppliers of goods and services try to keep up with limited tools to adapt quickly enough. When coupled with a mostly predictable inflating circle, due in no small part to self-inflicted wounds on the policy front in our opinion, we can expect a widespread belief that, in general, growth expectations will need to come down along with margins. This is inherently going to add to investor nervousness as many companies and the analysts’ who follow them revise revenue and earnings projections downward for the near to intermediate term. Equally, increased domestic and global inflation conversation will no doubt help facilitate broader market selling from time to time.

Just consider... what was once wide consensus, even at the fed et al, that this (inflation/supply chain disruption/labor shortage, etc.) was “transitory” has steadily become a revised consensus that it may be a “longer transition”. By the way, whether those who make up the consensus wish to admit it or not, altering the terms essentially permits the purveyor to extend the concept well beyond most accepted historical definitions of “transitory” so as to not be proved wrong at some point in the future. The fact is more likely that no one really knows how long it may take to normalize.

Given the myriad of variables, from the lingering impacts of COVID to the variety of choices being made on how to move forward politically and corporately, one could easily and reasonably posit a wide array of scenarios. For example, when coupled with meaningful numbers of permanent exits from the labor force, if we are in a new commodity inflation super cycle like 2004 and/or if China is slow walking goods to retaliate for aggressive trade policies, we could be in for a very long and painful stretch. Now wait for it, the classic macro caveat, “on-the-other-hand” if herd immunity plus vaccines allow for steady de-bottlenecking of ports via meaningful uptake in over the road transportation and full operational capacity returns to egg, meat, and dairy supply, as well as our industrial supporting cast then it would not be out of reason to suggest that, although not transitory, the system could be operating with adequate levels of efficiency sometime next year. You might guess that although we feel there is some value in laying out a range of outcomes to help set a rational backdrop – we do so with the experience that people and markets are not always rational.

Having read the preceding, you quite possibly came away with the proverbial goose egg or maybe you are more confused than when we began. There is some method to the madness.

When there are strong divergent views about big issues, we have been reasonably successful because we are sorting the headlines through the lens of specific businesses, not the other way around. In truth, in times just like these, we believe our close-to-the-ground research is of significant value in muffling the noise. As we have mentioned in previous quarters, we have been out in the field visiting portfolio companies as well as prospective businesses for the better part of the past twelve months with ever increasing levels of activity this calendar year. Virtually all our portfolio companies are feeling ongoing workforce challenges, to varying degrees, even if only due to continued COVID related concerns. Most have not been immune to supply disruptions but again most, we believe, appear to be adapting reasonably well up to this point. This by no means suggests that there are not wide-spread negative impacts from inflated input costs and transportation bottlenecks. There are and will likely continue for some time. Of note, for decades we have taken a somewhat irksome soapbox stance on security of supply matters across all value chains. It continues to be rather remarkable to us in some ways how variability of technological adoption is so easily ignored, and an almost blind faith based on discrete system sophistication continues to create significant issues.

For us to take advantage of the chaos, it is important for us to understand what specific issues each of our businesses face, where they are impacted the most, and how they are not only mitigating negative influences but identifying and taking advantage of unique opportunities. Just as was the case at the onset of the pandemic and lockdown, we believe the time we have spent face-to-face, over years in many cases, with management teams affords us with excellent contextual insight when internally debating each company's value to your portfolio.

Our new idea pipeline is healthy, and of the companies moving through the due diligence process, we are generally pleased with quality and price. As we continue to seek the very best long term investment opportunities amid a storm that shows little signs of abating soon, we appreciate your confidence in our team.

PORTFOLIO UPDATE

During the third quarter of 2021, the Small Cap Strategy Composite returned approximately -2.97% on a gross basis (-3.14% net*) versus the Russell 2000®, which returned -4.36% and the Russell 2000® Value, which returned -2.98%, over the same period. Year-to-date, the composite returned approximately +14.26% on a gross basis (+13.68% net*) versus the Russell 2000®, which returned +12.41% and the Russell 2000® Value, which returned +22.92%, over the same period. The strategy continues to outperform both indexes on a since inception annualized gross and net basis.

Hill-Rom Holdings, Inc. (HRC) is the leading contributor on an absolute basis this quarter. **HRC** is a leader in global connected care medical technology, has delivered solid results throughout 2021, and, in the most recent quarter, exceeded expectations with a 10% revenue increase year-over-year driven by strength across segments. The company also raised its full year revenue guidance based on underlying strength of the business. In early September, **HRC** entered into a definitive agreement to be acquired by Baxter International for \$10.5 billion, or \$156 per share. This price represented a 26% premium to **HRC's** closing stock price on July 27, the last trading day prior to media reports speculating about the potential transaction. Baxter is seeking to capitalize on **HRC's** strengths in product innovation and connected care solutions. We believe this transaction validates our thesis that **HRC** is a unique business with a strong market position and attractive growth prospects. The transaction is expected to close by early 2022.

Murphy USA, Inc. (MUSA), a leading retailer of gasoline and convenience merchandise, was another leading contributor on an absolute basis this quarter. The company continues to earn outsized fuel margins as it benefits from its low-cost, high-volume business model. In the environment created by the pandemic, competitors with lower fuel volumes and store traffic and higher embedded labor costs are forced to price at higher margins in order to support profits. As a result of being relatively less impacted by these headwinds, **MUSA** gets to benefit from these higher margins at a disproportionate rate. Owing to these trends, 2020 was a windfall year for **MUSA's** profits, and so far, 2021 is more of the same. Management continues to re-deploy profits into store expansion and renovation and an aggressive share repurchase pace -- share count is down ~9% year-over-year as of June 30.

The Brink's Co. (BCO), the world's largest cash management company, was the leading detractor on an absolute basis this quarter despite delivering solid results the first half of 2021. Even with the continued effects of shutdowns due to the Delta variant, the company's Q2 2021 revenue was up 27% compared to Q2 2020. Their operating margin was up 51% from \$73 million in Q2 2020 to \$111 million in Q2 2021 as the company benefitted from sustained cost reductions. U.S. cash processed for **BCO** was up 17% in Q2 2021 compared to Q2 2020, and up 19% when comparing Q2 2021 vs. Q2 2019. The stock price was impacted in the quarter by the company's pre-announcement that labor shortages and COVID-related shutdowns would impact Q3 and Q4 results more than previously expected. We spent time in Dallas with management during the quarter, and, with the short-term issues aside, we contend that **BCO** has a strong core business that is poised to generate substantial cash in the near and intermediate term as economies around the globe reopen. We believe this, coupled with Brink's Strategy 2.0 focusing on digital solutions appealing to a large unreached retail space, creates a strong case for seeing long-term value generation.

Timken Co. (TKR), a leading global manufacturer of highly engineered bearings and mechanical power transmission components, was another leading detractor on an absolute basis this quarter. After setting a record for both sales and earnings per share in the second quarter, the company lowered full year guidance on a pre-release in September due to supply chain disruptions as well as continued inflationary pressures. Despite these near-term supply-side impacts, management believes underlying demand will continue to remain strong throughout the rest of 2021 and into 2022. One notable source of demand is the secularly growing solar and wind energy markets, which are expected to grow at high single digits over the next decade. The higher bearing and power transmission content per megawatt for wind and solar compared to fossil energy should provide a nice tailwind for **TKR's** bearings and drives. Financial flexibility remains solid with Net Debt/EBITDA of 1.7x as of 6/30/2021, which should allow the company to continue deploying discretionary cash flow to organic growth opportunities, bolt-on acquisitions, and share repurchases in our opinion.

During the third quarter of 2021, we fully exited **Frontdoor, Inc. (FTDR)**, and we initiated a new position in **Univar Solutions, Inc. (UNVR)** in the Small Cap Strategy Composite.

We exited our position in **Frontdoor, Inc. (FTDR)** primarily because of concerns with management's focus and attention. While their team is optimistic about the new technology-driven businesses (Pro Connect and Stream), the strategy for driving improvement in the base business (>95% of revenue) is much less clear. We initiated our investment in 2020 and never built out the position given the aforementioned lack of conviction. With substantial competition for capital in the portfolio and a strong slate of new ideas, we made the decision to exit.

Univar Solutions, Inc. (UNVR), a global chemical and ingredient distributor and provider of value-added services, is a new position in our Small Cap Strategy Composite. **UNVR** benefitted year-to-date from chemical price inflation and strong demand in industrial markets. They are also beginning to realize synergies from the integration of Nexeo, acquired in 2019, and on track to provide \$120 million of net synergies by Q1 2022. We met with senior management at their Chicago headquarters during the quarter. The company faces supply chain challenges like many others, but they have managed through the supply chain difficulties well, and they have a very clear plan to improve operating metrics. Overall, we see **UNVR** as well-positioned for growth in the mid to long-term as they streamline their business and processes, drive margin growth, and reduce leverage.

As always,

Michael Cook
CEO and Co-Chief Investment Officer
SouthernSun Asset Management

Phillip Cook
Co-Chief Investment Officer and Principal
SouthernSun Asset Management

³Information is not statistically meaningful due to an insufficient number of periods.

SouthernSun Asset Management, LLC, an SEC registered investment adviser, is a research-driven investment management firm implementing long-only domestic and global equity strategies for institutions and individuals. SouthernSun provides investment advisory services for its clients using a proprietary investment research process based on fundamental analysis and seeks to invest in niche-dominant, attractively-valued companies with financial flexibility and uniquely-fitted management teams.

SouthernSun Asset Management, LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. SouthernSun Asset Management, LLC has been independently verified for the periods January 1, 1990 through June 30, 2021. The verification report(s) is/are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report. GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Subsequent periods are currently undergoing verification by ACA Performance Services and, as such, performance may be subject to change.

Performance results shown above are included as part of a complete disclosure presentation. The SouthernSun Small Cap Strategy Composite contains fully discretionary equity accounts invested in small cap securities (defined as equity securities with market capitalizations that are within the range of the Russell 2000 Index at the time of initial purchase during the most recent 12-month period, based on month-end data) and for comparison purposes is measured against the Russell 2000 and Russell 2000 Value indices. As of March 10, 2017, the minimum asset level to be included in this composite is \$1,000,000. As of August 1, 2019, the SouthernSun Small Cap Strategy Composite added new accounts from the SouthernSun Small Cap Managed Composite due to the reduced number of different securities between the two composites. In general, when an account meets a composite's inclusion criteria for a full month, it will enter that composite as of the beginning of the following month. Similarly, if an account no longer meets a composite's inclusion criteria for a full month, then it will be removed from that composite at the beginning of the following month. Our firm-wide disclosure policy states that "If two or more portfolio holdings are absent relative to the firm's model portfolio for that strategy, as a result of client restrictions" then it's removed from that individual composite. Additionally, this composite does not include accounts that are overly restrictive with regard to 1) a new range for small cap securities (that are, at purchase, normally within a similar range to that of the maximum and minimum of the Russell 2000 Index on a trailing 12-month basis; and 2) maximum cash level restrictions. Any other guidelines that the chief investment officer feels are overly constraining for the management of a discretionary account will also be taken into consideration when eliminating accounts for inclusion in the Small Cap Strategy composite. Prior to January 1, 2017, the composite did not adhere to a significant cash flow policy. From January 1, 2017 to February 6, 2017, accounts were removed when experiencing a significant cash flow. As of February 7, 2017, the composite does not adhere to a significant cash flow policy. Additional information regarding the treatment of Significant Cash Flows is available upon request. A list of composite descriptions, a list of limited distribution pooled fund descriptions, and a list of broad distribution pooled funds are available upon request. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Trade date valuation has been used. The U.S. dollar is the currency used to express performance. Returns are stated gross and net of management fees and include the reinvestment of all income; provided that in the case of any mutual funds, gross returns reflect the market value of the account. If mutual funds accounts are within the composite, only the management fee is applied. No daily fund accruals are recorded. Net of fee performance was calculated using actual management fees, provided that the performance returns for the initial account in the composite were only calculated on a gross basis from October 2003 to October 2004. The management fee schedule is as follows: \$0 - \$50,000,000 is 1.00%, \$50,000,001 - \$100,000,000 is 0.95%, \$100,000,001 and above is 0.90%. This schedule is subject to a \$50,000 minimum annual fee. A management fee was not applied, however, to the sole SouthernSun Small Cap Strategy account in 2003. Actual investment advisory fees incurred by clients may vary. Beginning October 1, 2019, a significant number of accounts in the composite are custodied with a broker that does not charge trading expenses. Accounts custodied with other brokers may incur trading expenses which may reduce returns. The CIT fee schedule for the Founders Share Class is 0.70% and for the Class 1 is 0.85%. The annual composite dispersion presented is an asset-weighted standard deviation of gross returns for accounts in the composite the entire year. The three-year annualized standard deviation measures the variability of the composite gross returns and the benchmark returns over the preceding 36-month period. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The SouthernSun Small Cap Strategy Composite was created January 1, 2017. The inception date of the SouthernSun Small Cap Strategy Composite is October 1, 2003.

The Russell 2000 Index measures the performance of the small cap segment of the U.S. equity universe. The Russell 2000 Index is a subset of the Russell 3000 Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership. The Russell 2000 Value Index measures the performance of small-cap value segment of the U.S. equity universe. It includes those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values.
